

Visionflex technology provides access to high quality healthcare anywhere, anytime. Established by two Australian engineers, Visionflex has been a telehealth innovator since 2014.

Using our knowledge and experience, we work closely with our clients to help them deliver the most effective and secure telehealth service to their patients.

With world first clinical functionality, new generation HD video conferencing software, and easy to use hardware, our solution brings together medical expertise and patients around the globe.

Our system has the power to transform internet connected devices into a powerful medical examination and diagnostic tool, perfect for clinical settings that require collaborative, evidence-based decision making.

Product/ Solution Features

Featuring new bandwidth-optimising technology that delivers diagnostic-quality video and audio, as well as high-speed data transmission and end-to-end encryption, Vision is suitable for all clinical settings that require collaborative, evidence-based decision making.

Using cutting-edge technology and Visionflex's telehealth devices, medical providers can contact a doctor for video conferencing, and medical examinations that capture high-quality images, videos, and patient vitals.

Why to choose Visionflex

- Built-in clinical functions allow for a range of patient health data to be collected, viewed, and shared in real time.
- All patient data can be securely uploaded to an electronic health record system, and accessed in real time, from anywhere in the world.
